# The **LLVM** Compiler Infrastructure

#### LLVM Overview

The LLVM Project is a collection of modular and reusable compiler and toolchain technologies. Despite its name, LLVM has little to do with traditional virtual machines

The name LLVM itself is not an acronym; it is the full name of the project.

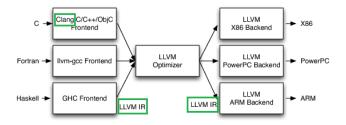

#### **Latest LLVM Release!**

1 November 2022: LLVM 15.0.4 is now available for download! LLVM is publicly available under an open source License. Also, you might want to check

# Clang: a C language family frontend for LLVM

The Clang project provides a language front-end and tooling infrastructure for languages in the C language family (C, C++, Objective C/C++, OpenCL, CUDA, and RenderScript) for the LLVM project. Both a GCC-compatible compiler driver (clang) and an MSVC-compatible compiler driver (clang-cl. exe) are provided. You can get and build the source today.

clang hello.c -o hello

hello @ CompilerExplorer

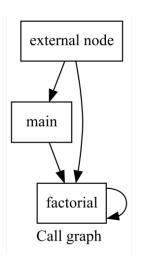

clang -Xclang -ast-dump -c hello.c

```
Function Attrs: noinline nounwind optnone uwtable
define dso_local i32 @main(i32 %0, i8** %1) #0 {
  %3 = alloca i32, align 4
  %4 = alloca i32, align 4
  %5 = alloca i8**, align 8
  store i32 0, i32* %3, align 4
  store i32 %0, i32* %4, align 4
  store i8** %1, i8*** %5, align 8
  %6 = call i32 @factorial(i32 2)
  %7 = mul nsw i32 %6, 7
  %8 = icmp eq i32 %7, 42
  \%9 = zext i1 \%8 to i32
  ret i32 %9
clang -S -emit-llvm factorial0.c f0-opt0.ll
```

```
